Adult Service Manager - [Risk of Harm Parameters]

Control Jump to Rating Help

Risk of Harm Next Dimension

of nonverbal thoughts or intentions, in many cases an individual may harm from misinterpretations of reality, from inability to adequately care for oneself, or from altered states of consciousness due to use of intoxicating substances in an uncontrolled manner. For the purposes of evaluation in this parameter, deficits in ability to care for oneself are considered only in the context of their potential to cause harm. Likewise, only behaviors associated with substance use are used to rate risk of harm, not the substance use itself. In addition to direct evidence of potentially dangerous behavior from interview and observation, other factors may be considered in determining the likelihood of such behavior such as: past history of dangerous behaviors, ability to contract for safety, and availability of means. When considering historical information, recent patterns of behavior should take precedence over patterns reported from the remote past. Risk of harm may be rated according to the following criteria:

1 - Minimal risk of harm

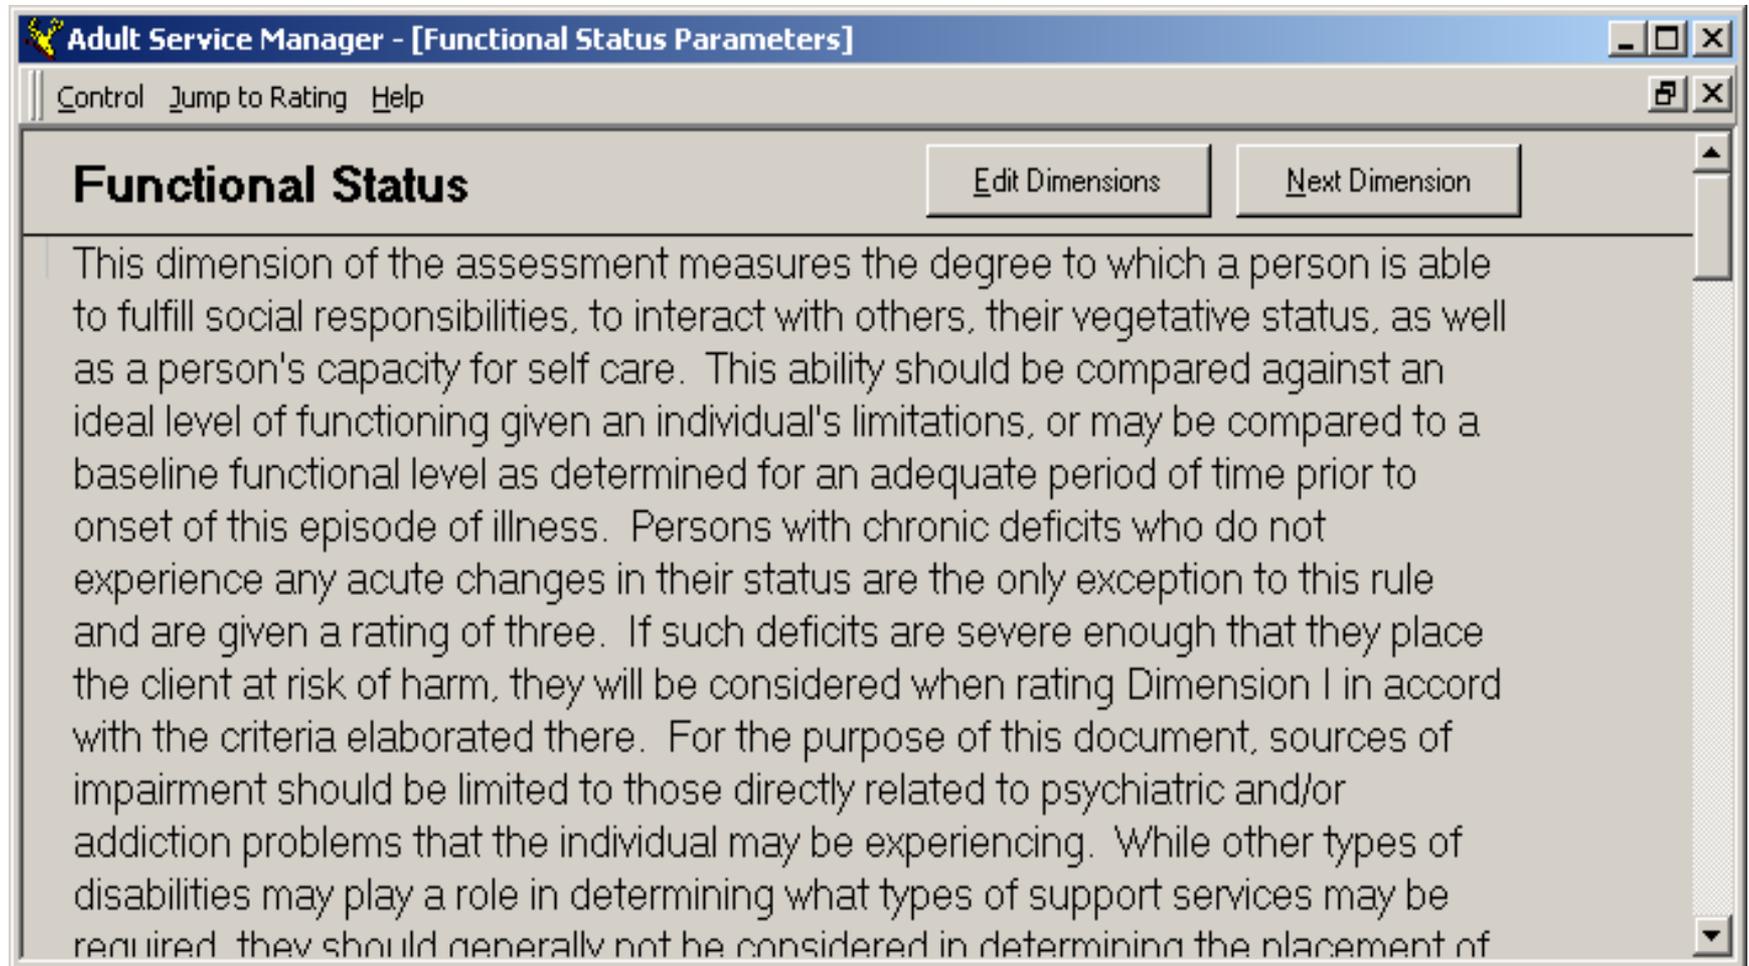

No indication of suicidal or homicidal thoughts or impulses, and no history of

Each dimension begins with a description of what is to be evaluated followed by the criteria in five levels of intensity.

Dimension Risk of Harm

Here is an illustration of the criteria for Risk of Harm , Level 1 and Level 2 are shown but all dimension have 5 levels of criteria. You choose the criteria by clicking on the box to the left of the criteria. Remember you can pick more than one criteria and criteria at different levels if appropriate. The computer will pick the highest criteria to use for scoring.

Functional Status

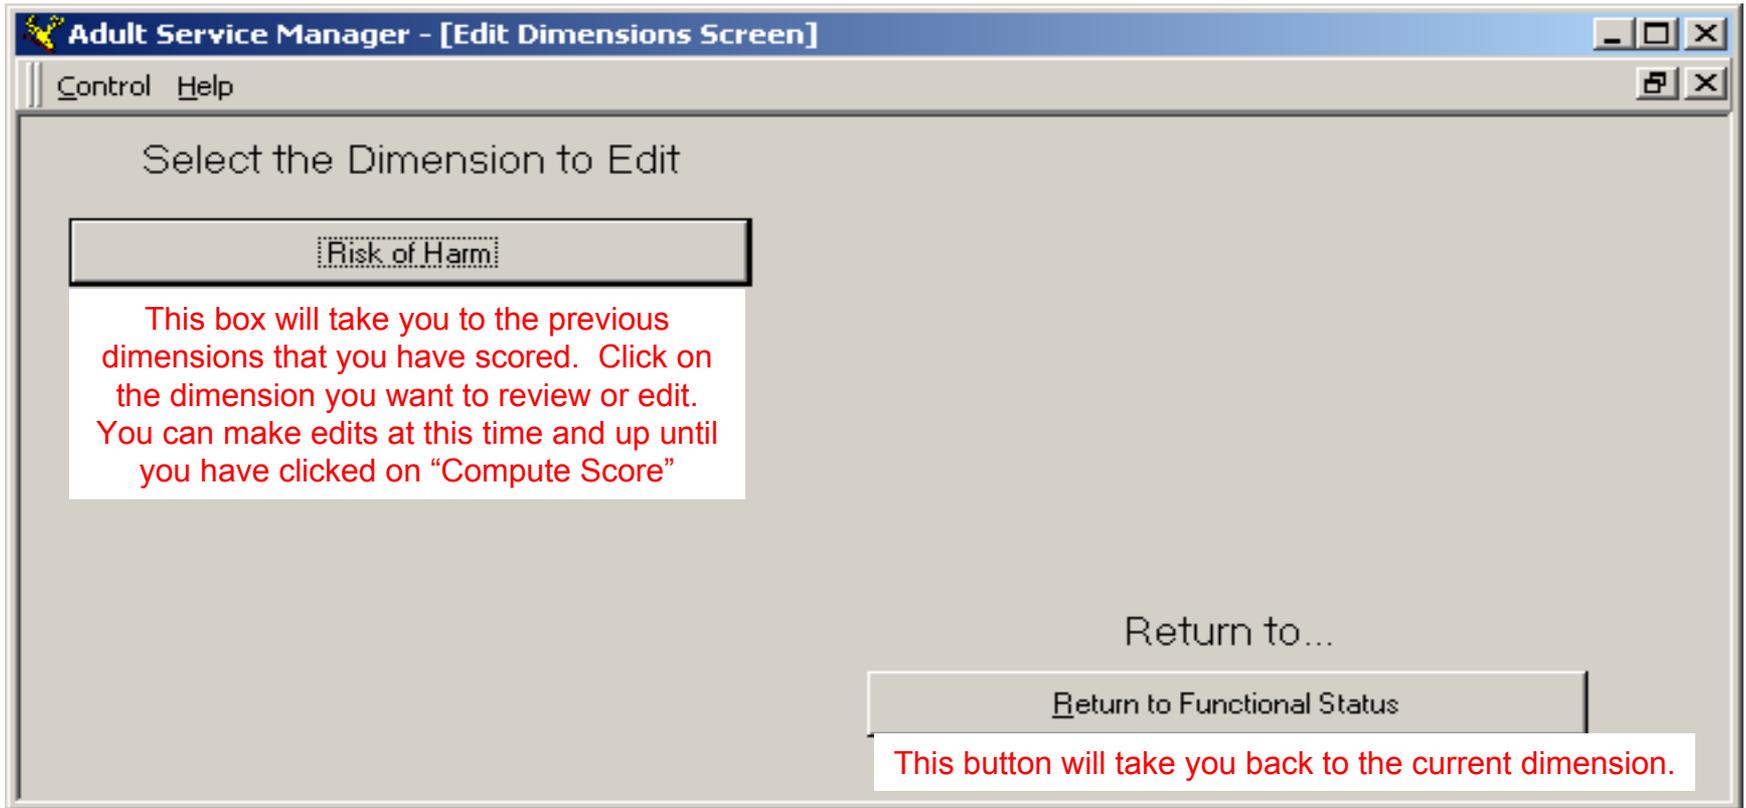

The screenshot shows a software window titled "Adult Service Manager - [Functional Status Parameters]". The window has a menu bar with "Control", "Jump to Rating", and "Help". Below the menu bar, there are two buttons: "Edit Dimensions" and "Next Dimension". The main content area is titled "Functional Status" and contains a detailed paragraph of text describing the assessment dimension.

Functional Status

This dimension of the assessment measures the degree to which a person is able to fulfill social responsibilities, to interact with others, their vegetative status, as well as a person's capacity for self care. This ability should be compared against an ideal level of functioning given an individual's limitations, or may be compared to a baseline functional level as determined for an adequate period of time prior to onset of this episode of illness. Persons with chronic deficits who do not experience any acute changes in their status are the only exception to this rule and are given a rating of three. If such deficits are severe enough that they place the client at risk of harm, they will be considered when rating Dimension I in accord with the criteria elaborated there. For the purpose of this document, sources of impairment should be limited to those directly related to psychiatric and/or addiction problems that the individual may be experiencing. While other types of disabilities may play a role in determining what types of support services may be required, they should generally not be considered in determining the placement of

All dimensions are set up uniformly. Select the appropriate criteria and select "Next Dimension" to continue through the instrument. If you wish to review or edit criteria previously selected click on "Edit Dimensions"

Edit Dimension Screen

If you clicked the "Edit Dimension" button, this screen will open.

Last Dimension

Adult Service Manager - [Engagement Parameters]

Control Jump to Rating Help

Engagement Edit Dimensions Compute Scores

- Shows some recognition of personal role in recovery and accepts some responsibility for it

3 - Limited Engagement

- Some variability or equivocation in acceptance or understanding of illness and disability
- Has limited desire or commitment to change
- Relates to treatment with some difficulty and establishes few, if any, trusting relationships

“Engagement” is the last dimension. Here you will notice that a “Compute Score” button has replaced the “Next Dimension” button. After selecting the appropriate criteria in this dimension you will be able to click on “Compute Score”. **Remember, once you click on “Compute Score” you will no longer be able to change your criteria in any of the dimensions and the Level of Care will be determined by your criteria selections.**
